## LETTER OF PROCLAMATION

The Province of Ontario Contingency Plan for Spills of Oil and Other Hazardous Materials is designed to deal with major pollutorial spills in Ontario, and serves to supplement the Joint Canada-United States Marine Pollution Contingency Plan for Spills of Oil and Other Noxious Substances and the National Marine Emergency Plan.

Notwithstanding other considerations as outlined in the Plan, the Provincial Plan will be implemented 1.) where a spill incident is of a magnitude beyond the response capability of the party responsible for, or having precipitated the incident, or when the responsible party fails to respond to the spill incident, 2.) in certain cases where the source of a major spill cannot be established readily, or 3.) upon request for assistance. This Plan will be implemented by the Ontario Ministry of the Environment with assistance provided as necessary by other Provincial or Federal agencies.

This Plan has been accepted and approved by:

Deputy Minister  
Ministry of the Environment

Acting Deputy Minister  
Ministry of Natural Resources

Deputy Minister  
Ministry of Transportation  
and Communications

Deputy Minister  
Ministry of Health

Deputy Minister  
Ministry of the Solicitor General

Deputy Minister  
Ministry of Consumer  
and Commercial Relations

Deputy Minister  
of Labour

Regional Director  
Department of Transport

for Regional Director General  
Department of the Environment

DATED AT TORONTO: April 26, 1978

QUICK GUIDEEMERGENCY

- involving death or injury
- involving fire
- requiring the evacuation of people
- involving or requiring the disposal of explosives
- incidents involving occupational health and safety matters
- involving goods regulated under the Transportation of Dangerous Goods Act
- involving a discharge of large amounts of contaminants to the atmosphere
- involving a discharge of pollutants from ships
- involving pesticides

CONTACT

- \* nearest police, fire and ambulance services
- \* nearest fire department
- \* nearest municipal or provincial police force
- \* nearest municipal police force
- \* nearest OPP Detachment, List 8, Annex III
- MOL, List 6, Annex III
- \* nearest police force

## CHAPTER 100

## INTENT

## 101 BACKGROUND

101.1 The threat of spills of oil and other deleterious materials to the environment requires positive coordinated action for alerting and countermeasure procedures. This need was recognized as early as 1968 and 1969 and led to the development of the Lake Erie Contingency Plan for Spills of Oil and Other Hazardous Materials which was published by the Ontario Water Resources Commission in July, 1970. In May 1971, the Commission published the Interim Province of Ontario Contingency Plan for Spills of Oil and Other Hazardous Materials.

101.2 The Plan developed in this manual has been accepted and approved by:

Ministry of the Environment	(Ontario)
Ministry of Natural Resources	(Ontario)
Ministry of Transportation	(Ontario)
Ministry of Health	(Ontario)
Ministry of the Solicitor General	(Ontario)
Ministry of Labour	(Ontario)
Ministry of Consumer and Commercial Relations	(Ontario)
Department of Transport	(Canada)
Department of the Environment	(Canada)

and supersedes the Lake Erie and the Interim Plans, named in paragraph 101.1, and fulfills the requirements of the Order-in-Council first issued as O/C 1487 in 1975. This Order-in-Council requires the Ministry of the Environment to coordinate the resources of the Province for spills.

101.3 The development of this Plan is consistent with the intent of the Lake Erie and the Interim Plans, satisfies Cabinet's requirement for a spill plan, and supplements the provision for action by the Minister of the Environment established by Section 82 of the Environmental Protection Act.

## 102 PURPOSE AND LIMITATION

102.1 The Ministry of the Environment is responsible for achieving and maintaining a quality of the environment that will protect human health and the ecosystem, and will contribute to the well-being of the people of Ontario. To achieve these objectives, the Ministry of the Environment operates, as a regulatory body, numerous surveillance and abatement programs designed to maintain acceptable standards.

With respect to pollutants which are spilled into the environment, the responsibility for the containment and clean-up remains with the discharger. The Ministry's role is to ensure that the discharger responds promptly, and complies with requirements for clean-up, disposal, and repair of damage to the environment. Municipal entities may also be involved in the response to spills if there is need for the protection of public safety, property, vital services and sensitive areas.

The responsibility of the Ministry of the Environment, with respect to spill contingencies, is summarized as follows:

- 1.) - to receive notification and information of spills of pollutants to the natural environment, and to assist in warning "downstream" users or potentially affected parties where applicable.
- 2.) - to inspect and monitor spill incidents in order to:
  - (a) ensure that the discharger takes appropriate measures to clean up,
  - (b) give advice and make recommendations as to the best practicable clean-up and disposal measures to be followed,
  - (c) where applicable, make recommendations with respect to procedures or equipment for spill prevention.
- 3.) - to assist the person or persons in command of an emergency dealing with a threat to the health and welfare of people and to property, as defined in the Emergency Plans Act, which may be caused by a discharge, or potential discharge, to the environment by providing available monitoring capability and advice within the Ministry's expertise and resources.

The municipality may respond to a spill as provided for under Section 88 of the Environmental Protection Act. In the event that neither the discharger nor the municipality respond, the Ministry of the Environment may assume operational control as a last resort. This would occur in the event that the discharger fails to respond, requests assistance or the identity of the discharger cannot be established and there is a significant environmental threat. In such event, the Ministry may resort to "directions" issued to staff or Ministry agents under Section 82 of the Environmental Protection Act, to "orders" issued to virtually anyone under Section 85 of the Act or by resorting to available resources of the Province (Order-in-Council 1487/75) by invoking the "Province of Ontario Contingency Plan for Spills of Oil and Other Hazardous Materials".

The Plan may be invoked under the conditions specified. The Plan is limited to dealing with the containment, clean-up and disposal of the spilled pollutants, and is superseded by any plans and procedures dealing with a threat to the health and welfare of people and to property.

December 1990

102.2 This Plan does not provide a primary response mechanism for pollution incidents on the Great Lakes System which occur through the activities associated with shipping. Such incidents fall under the jurisdiction of the Department of Transport which has developed the National Marine Emergency Plan. Neither does this Plan provide a primary response mechanism for spill incidents which threaten to cross the U.S.A.-Canadian boundary, for which Annex I of the Joint Canada-United States Marine Pollution Contingency Plan for Spills of Oil and Other Noxious Substances was developed. The International Plan is administered on the Canadian side by the Department of Transport.

102.3 The Department of Transport may make a request for provincial assistance in support of the national and international marine plans through this Plan. Such requests may be made through the nearest Regional Director of the Operations Division, Ministry of the Environment, his designate, or in their absence, through the Chairman of the Regional Response Team (see Annex II).

102.4 Furthermore, this Plan is not designed to provide a primary response mechanism for spills of minor or moderate magnitude for which a response capability can be anticipated at the local or regional level, or for which the responsible party can be expected to respond. Under all conditions, and without regard to the spill magnitude, it is the responsibility of the polluter to effect countermeasures (see also paragraphs 105.5 and Section 204).

102.5 Notwithstanding the above, the Ministry of the Environment may provide technical expertise relative to any spill where the need dictates such, or upon request (see Annex I for Ministry of the Environment Contacts).

102.6 The Ministry of the Environment may also provide physical assistance in combatting a spill of any magnitude under this Plan when requested to do so, with the express understanding that expenses incurred to the Ministry as a result of such request, will be reimbursed by the party requesting the assistance (paragraph 205.1).

102.7 Requests for assistance may be accepted verbally by the Ministry of the Environment, giving consideration to the urgency of the situation, and shall be confirmed in writing via telegram, fax, registered letter or other direct means as soon as practical under the circumstances, signed by a person with authority to make the implied financial commitment (paragraph 205.1). Such confirmations must be addressed to the Regional Director, Operations Division, Ministry of the Environment; see Annex I for the Regional offices.

102.8 The notification and alerting procedures developed in this Plan are applicable to all spills to the natural environment of gaseous, liquid or solid substances.

102.9 It is essential that very close working relations be maintained with the Ontario ministries of Health and Labour in the event of gaseous releases and particularly where such releases cause or have the potential to cause death or serious injury to man.

December 1990

102.10 Priorities for action involving human life and safety as well as property supersede this Plan. Restoration of property damaged by spilled material is to be made to the extent practicable within the concepts under Part IX of The Environmental Protection Act. Where the spill of oil or hazardous materials indicates the need to evacuate people, the decision for and the undertaking of an evacuation will normally be made by municipal authorities with technical input from a number of sources and will precede the invocation of this Plan.

102.11 Accidental releases of radioactive materials from nuclear power stations affecting areas within the power station proper fall under the jurisdiction of Ontario Hydro. This agency has developed contingency plans for dealing with such eventualities.

102.12 Accidental releases of radioactive material from nuclear power stations affecting areas beyond the power station proper fall under the Province of Ontario Nuclear Emergency Plan, developed by the Ministry of the Solicitor General.

### 103 OBJECTIVE

103.1 The objectives of this Plan are:

- (a) to develop appropriate preparedness measures and effective systems for reporting the occurrence of spill incidents within Ontario (see Annex 1);
- (b) to institute countermeasures in a major incident to neutralize and/or restrict the further spread of the pollutant thus minimizing, where applicable:
  - hazard to animal and plant life
  - damage to property
  - disruption to water supply (domestic, industrial, agricultural, etc.);
- (c) to provide expertise and countermeasure resources necessary for a response to minor or moderate spill incidents when so requested (see Section 102.6);
- (d) to provide information on the availability of resources and other vital contacts, countermeasure techniques, known environmentally sensitive areas, and information on other related topics in support of this as well as other contingency plans designed to minimize environmental damage from spills within Ontario;
- (e) to supplement the Canadian Coast Guard Central Regional Marine Emergency Plan;

- (f) to supplement the Joint Canada-United States Marine Pollution Contingency Plan for Spills of Oil and Other Noxious Substances and the National Marine Emergency Plan.

#### 104 SCOPE

104.1 This Plan applies to all areas within the jurisdiction of the Province of Ontario.

104.2 This Plan and its Annexes are applicable in whole or in part whenever and wherever a major spill as defined in paragraph 105.5 occurs, or where a request for assistance is received, as outlined in paragraphs 102.5, 102.6 and 102.7, and Section 205.

104.3 This Plan is intended to organize the activities of the various government agencies which may be involved in the containment and clean-up phase of a spill incident.

104.4 This Plan is a consolidation of established procedures and policies compiled for the purpose of dealing with major spills. The policies referred to in this publication serve as a guide for spills of any magnitude.

#### 105 DEFINITIONS

105.1 Pollution incident or spill incident: A spill, or the imminent threat of a spill of oil or any other hazardous material of a magnitude or significance as to require a response to contain, stabilize, clean-up and dispose of the substance including any soil and/or debris contaminated as a result of the particular spill in order to remove the threat to the environment, including the public health and welfare, or to minimize the adverse effects of same.

105.2 Oil: Oil of any kind or in any form, including, but not limited to, petroleum or a "flammable liquid"\*, fuel oil, vegetable or similar oils.

105.3 Hazardous Materials: Any material, substance or product including all pesticides\*\* which by itself, or in conjunction with other materials because of its proximity, presents a hazard to or adversely affects man, any plant matter, animal or other living thing or has a potential to do so.

105.4 Spill: Defined in Part IX of The Environmental Protection Act as a discharge, when used with reference to a pollutant,

(i) into the natural environment,

(ii) from a structure, vehicle or other container, and

\* defined in The Gasoline Handling Act, or any regulations made thereunder.

\*\* defined in The Pesticides Act, 1973, or any regulations made thereunder.

December 1990

- (iii) that is abnormal in quantity and quality in light of all circumstances of the discharge

which causes the adverse effects, as listed in The Environmental Protection Act.

105.5 For the purpose of this Plan, spills are referred to as minor, moderate or major and defined with regard to response capability and perceived impact as follows:

- (a) Minor Spill: A spill of such magnitude and nature that does not cause significant adverse effects, or public concerns and that the spiller can, utilizing his own resources or resources available to him, undertake the necessary measures to control, contain and clean up the material spilled.
- (b) Moderate Spill: A spill of such magnitude and nature that causes or is likely to cause significant adverse effects in the immediate vicinity of the spill for which the resources under a municipal or co-operative contingency plan may be required to effectively contain and clean up the material spilled;
- (c) Major Spill: A spill incident of oil or other hazardous material of such magnitude and nature as to require the resources of the Province in addition to those available from the responsible party and through a local contingency plan, or a spill which gets out of control when action is being taken under a local contingency plan and the resources of the Province are required to assume control.

105.6 Dispersant: A dispersant includes any substance used during an oil spill clean-up operation for the purpose of dispersing oil into the water column, whether or not this substance was specifically formulated or otherwise intended to comply with Federal approval requirements. See also paragraph 201.7 and Annex IV.

## CHAPTER 200

### POLICY AND RESPONSIBILITIES

#### 201 POLICY

201.1 It is recognized that good communications between the participating agencies and between other Provincial, Federal or Municipal agencies or governments are vital to the successful implementation of this Plan.

201.2 The Ontario Ministry of the Environment will co-operate as fully as possible and practical to respond expeditiously to a spill incident of major proportions or to a spill incident of less magnitude where requested to do so. Action taken by the Ministry of the Environment pursuant to this Plan will be consistent with the Ministry's responsibility under the statutes it administers. When other Provincial or Federal agencies participate in the response to a pollution incident under this Plan, such activity will also be consistent with the responsibilities of these agencies.

201.3 When this Plan is activated in whole or in part during a major spill, or when assistance is requested in the event of a minor or a moderate spill, costs incurred by participating agencies through activities in addition to the normal activities of these agencies, which were specifically so requested by the Ministry of the Environment, will be reimbursed by the Ministry of the Environment. The Ministry of the Environment will in turn seek reimbursement from the party responsible for the pollution incident through direct billing or with the aid of civil or criminal legal action as the circumstances dictate.

201.4 When the response capability provided through this Plan is requested or required in support of or as supplement to the Canadian Coast Guard, Central Region, Marine Contingency Plan or the Joint Canada-United States Marine Pollution Contingency Plan, the expenditures incurred thus by the participating agencies of this Plan will be reimbursed in accordance with the procedures established in the aforementioned plans.

201.5 When this Plan is activated in whole or in part during a major spill incident or when assistance is requested in the event of a minor or moderate spill, the Ministry of the Environment may issue appropriate news releases and prepare reports of the incident, and make these available to interested parties.

201.6 In a response situation which falls within the scope of this Plan, the participating agencies agree to make available at the request of the On-Scene Coordinator any resources they may have which could be used beneficially for an effective operation as dictated by the circumstances of the pollution incident. In addition, the participating agencies agree to make available the necessary resources which may be available from the private sector where the participating agencies may have access to these resources through contractual arrangements.

December 1990

201.7 In response actions to oil spills, the use of dispersants is generally discouraged (see Annex IV) except when their use will:

- (a) prevent or substantially reduce the hazard to human life or limb, or the incident is an unacceptable hazard of fire to property. These priorities are determined by other authorities and supersede this Plan.
- (b) in the judgment of the On-Scene Coordinator named in this Plan:
  - i) prevent or reduce a threat to a major population segment of a vulnerable species of waterfowl, and
  - ii) appear to be the most effective means by which to reduce the total impact of an oil spill with due consideration for effectiveness and other stipulations addressed in Annex IV.

201.8 The policy with regards to the use of sinking agents, surface tension modifiers and chemical oil spill treating agents including dispersants is delineated in Annex IV.

## 202 RESPONSIBILITIES OF PARTICIPATING AGENCIES

202.1 The Ministry of the Environment through The Ontario Water Resources Act, The Environmental Protection Act and The Pesticides Act is responsible for the protection of the natural environment in Ontario. In the event that this Plan is implemented, the Operations Division of this Ministry will provide the On-Scene Coordinator as well as the deputy, alternates, technical expertise and an emergency centre, as required. The Ministry will notify as appropriate other agencies, or groups, as outlined in the index of Annex III of any significant spill.

202.2 The Ministry of Natural Resources is responsible for fish and wildlife and recreational resources and other exploitable natural resources in Ontario. The Ministry will provide the necessary technical expertise in the management of natural resources and its surveillance, transportation and communications capability under this Plan. The Petroleum Resources Section of the Ministry of Natural Resources will be able to provide assistance in both surface and sub-surface spills relating to these activities.

202.3 The Ministry of Transportation through its Maintenance Branch will provide or make available heavy equipment and material if available as may be required for effective containment and countermeasures activities.

December 1990

202.4 The Ministry of Health is responsible for the health of the general public and, if the spill incident necessitates, will provide co-ordination with local health agencies.

202.5 The Ministry of Labour will provide medical advice as may be required by the circumstances of the spill.

202.6 The Ministry of the Solicitor General through the Ontario Provincial Police will provide assistance in police matters such as securing the site of operations within their area of jurisdiction, and if requested, provide the necessary liaison with municipal police forces as applicable.

202.7 The Ministry of Consumer and Commercial Relations, through its Fuels Safety Branch, agrees to provide necessary expertise and assistance in incidents involving gasoline or associated petroleum products where equipment failure or unsafe procedures are indicated.

202.8 The Department of Transport, through its Central Region Marine Emergency Office, within the jurisdiction of the Canada Shipping Act, and the Arctic Waters Pollution Prevention Act and the several regulations made thereunder, is responsible for:

1. taking direct and positive action to react to spills of oil or other hazardous material relating to marine activities occurring in the navigable waters of Ontario;
2. preparing for and reacting to all other marine emergencies as may be anticipated within the navigable waters of Ontario;
3. maintaining a support capability with equipment, manpower and expertise to assist with such other waterborne spills of oil and other hazardous material as may be requested by other organizations.

202.9 Environment Canada will provide information on countermeasure techniques, recovery equipment and chemical treating agents. Environment Canada's mandate focuses on environmental emergencies originating from federal facilities and/or other facilities which fall under the federal jurisdiction.

### 203 MECHANISM FOR INVOKING THE PLAN

203.1 The Plan may be invoked by the Regional Director of the Operations Division of the Ministry of the Environment (of the region in which the spill occurred) or his designate, upon recommendation from the On-Scene Coordinator, or as per paragraph 402.1, provided that such invocation does not interfere with the jurisdictional authority of other government departments or other levels of government.

December 1990

203.2 The party with the authority to invoke this plan (see paragraphs 203.1 and 402.1) will proclaim the Plan in effect and will notify by telephone, telegram, fax or other direct means the members of the Response Team closest to the site of the incident (see Chapter 300 and Annex II), and as soon as possible shall confirm his actions to the On-Scene Coordinator. The notification to the Response Team members must include all information available at that time, together with an opinion of the need for on-site representation by the entity being advised.

203.3 If the Plan has been invoked by the Regional Director of the Operations Division or his designate, the Spills Action Centre (see Annex I) must also be advised.

## **204 RESPONSIBILITY OF THE POLLUTER**

204.1 The discharger is required to report spills to the Ministry of the Environment (see Annex I) and is responsible for the timely containment, clean-up and disposal of spilled contaminants in an approved manner. The discharger is also responsible to ameliorate the adverse effects of a spill and to restore the natural environment. For specific requirements, refer to Section 14 and Part IX of the Environmental Protection Act and Ontario Regulation 618/85, as well as Section 16 of the Ontario Water Resources Act and Section 22 of the Pesticides Act. Notification to the Ministry of the Environment does not relieve the party of notification requirements to other agencies or parties under other notification requirements.

## **205 REQUEST FOR ASSISTANCE**

205.1 Requests for assistance as mentioned in Section 102 may be made through the nearest Regional Director of the regional offices listed in Annexes I and II or, alternately, through the nearest On-Scene Coordinator listed in Annex II. Such requests may be made through the Ministry's Spill Action Centre (see Annex I). As stated in paragraph 102.7 such requests must be confirmed in writing.

## **206 MYSTERY SPILLS**

206.1 Occasionally, the Ministry of the Environment becomes involved in a spill incident for which a source cannot be readily established; a spill commonly referred to as a mystery spill. Where and when such an incident presents a significant environmental hazard, the Ministry will attempt to establish the source and may effect the necessary countermeasure operation with the full intent of recovering the expenses thus incurred once the source has been established.

## CHAPTER 300

### RESPONSE ELEMENTS

#### 301 RESPONSE TEAMS

301.1 The Plan is intended to be implemented by a local Response Team.

301.2 The Response Team is intended to provide the administrative structure necessary for an orderly response to a major spill incident.

301.3 The Response Team under this Plan consist of representatives of the participating agencies listed in Section 202 from office nearest to the spill (see Annex II). Members of a team are expected to contribute to the countermeasures operations of a spill included in the four phases outlined in Chapter 400 of this Plan.

301.4 The general functions of a Response Team are:

- (a) to ensure that all necessary information is made available to the On-Scene Coordinator during a major spill incident, and to provide advice and assistance so that the most effective course of action can be formulated for combatting such spills;
- (b) to forward to the respective authorities relevant reports and recommendations including On-Scene Coordinators post-incident reports, and Response Team debriefing reports;
- (c) to provide an effective communications link during a major spill incident with the party responsible for the incident (if known) through the On-Scene Coordinator or his Deputy, the party or parties retained to contain and clean up the spill, and the government or regulatory agencies which have a vital interest in the particular spill incident;
- (d) to provide the necessary support staff for the proper function of a Response Centre and for the orderly accounting of countermeasure activities;
- (e) to record costs incurred in combatting a spill if so requested by the On-Scene Coordinator.

December 1990

301.5 Some measures of response functions will be performed each time the Plan is invoked. The degree of response will be subject to the demands of each particular situation. The specific responsibility of the Response Team and the relation of the Team to the On-Scene Coordinator during a spill incident are based on the following:

- (a) monitor incoming reports and evaluate the possible impact of reports related to the incident. To be at all times fully aware of the proposed actions of the On-Scene Coordinator;
- (b) coordinate the actions of the various agencies in supplying the necessary resources and assistance to the On-Scene Coordinator. Assistance from a participating agency will normally be obtained through the appropriate member of the Response Team;
- (c) provide advice as required to the On-Scene Coordinator. The Response Team does not have operational control over the On-Scene Coordinator;
- (d) may arrange the deployment of personnel to monitor the handling of the spill;
- (e) recruit other agencies, industrial groups or scientific groups to play their appropriate parts in support of the operation when required with the prior concurrence of the On-Scene Coordinator;
- (f) coordinate the preparation and periodic reporting on the status of the pollution incident to the respective government agencies.

301.6 The Custodian of this Plan will act as chairman of the Response Team.

301.7 The chairman of the Team or the On-Scene Coordinator of the Teams will make provision for regular meetings of the Team during a major spill and will arrange for the conducting of exercises relating to this Plan as appropriate.

## 302 ON-SCENE COORDINATOR

302.1 The coordination and direction of the pollution control efforts on the scene of a pollution incident will be achieved through an official appointed by the Ministry of the Environment as the On-Scene Coordinator (OSC). The OSC is normally the District Officer of the MOE offices listed in Annex II. In the event of a major spill, his responsibility will continue until the threat of the pollution incident has been dealt with satisfactorily, or, in a situation where a pollution incident escalates to such proportions necessitating the invocation of a contingency plan of higher order, he is relieved of his responsibilities upon invocation of such a plan.

302.2 In the event of a major pollution incident, the first official of the Response Team arriving at the site shall assume coordination of activities of the Plan until the predesignated On-Scene Coordinator or his deputy becomes available to take charge of the operation.

302.3 The On-Scene Coordinator shall determine the pertinent facts about a particular pollution incident, including the nature, amount and location of material spilled, probable direction and time of travel of the material (if applicable), resources available and required, and the installations and property which have been or may be affected.

302.4 The On-Scene Coordinator shall initiate and direct, as required, Phase II and III as described in Sections 402 and 403.

302.5 The On-Scene Coordinator shall call upon and direct the deployment of available resources to initiate and continue containment, counter-measures, clean-up and disposal functions.

302.6 In carrying out this Plan, the On-Scene Coordinator is to maintain an up-to-date and accurate information flow to the Response Team to ensure maximum effectiveness of the effort in protecting the natural resources and environment from pollution damage. It is understood that the necessary direct liaison between personnel at all levels in the participating agencies, the responsible party and the affected or potentially affected parties is essential for the successful and efficient completion of the operation.

302.7 The On-Scene Coordinator will arrange for the recording of costs incurred. This responsibility may be assigned to the Response Team.

302.8 The On-Scene Coordinator shall establish the priorities for protection on the basis of available approved plans or advice supplied by the ministries having resource responsibilities.

302.9 Upon request from the Response Team, the On-Scene Coordinator will submit to the Team such reports and recommendations as the Team may deem to be necessary.

December 1990

302.10 The On-Scene Coordinator of the Response Team nearest the location of a pollution incident of such a nature for which the Joint Canada-United States Marine Pollution Contingency Plan may be invoked, will be requested to serve as the focal point in providing assistance to the Joint Response Team under the International Plan. The Canadian Coast Guard's Marine Contingency Plan may have a similar requirement. (See paragraphs 102.2 and 102.3).

### 303 DEPUTY ON-SCENE COORDINATOR

303.1 The Deputy On-Scene Coordinator is furnished as a pre-designated alternate to the On-Scene Coordinator, and, if the situation warrants or dictates, has the same responsibility and authority as the On-Scene Coordinator when the latter is not available.

303.2 Where the pollution incident dictates, the Deputy On-Scene coordinator may be called upon to assist the On-Scene Coordinator.

### 304 RESPONSE CENTRE

304.1 When this Plan is activated, the Operations Division of the Ontario Ministry of the Environment will provide suitably functional facilities which will serve as the Response Centre, as considered necessary.

304.2 The Response Centre will be the operations quarters for the On-Scene Coordinator and the Response Team.

304.3 The Response Centre will be equipped with communications hardware suitable for the operation.

### 305 RESOURCES

305.1 The Response Team will carry out their function utilizing the resources that can be made available through their agency, resources from the local community as applicable and resources from the private sector.

305.2 The Spills Action Centre (SAC) of the Ministry of the Environment maintains inventories of response capabilities and chemical information data systems. The Spills Action Centre has trained environmental officers on staff 24 hours a day, 365 days a year. The information on the resources and contacts which the Centre relies on to deal with incidents routinely is available for spills for which this Plan may have to be invoked.

305.3 The Ministry of the Environment also operates a 24 hour environmental response program out of district offices. The response program ensures around-the-clock availability of environmental staff which permits an early assessment of serious incidents with knowledge of local resources. This environmental response program augments a response which may fall within the intent of this Plan.

## CHAPTER 400

### RESPONSE OPERATIONS

#### 400 RESPONSE OPERATIONS

400.1 The actions which are taken to respond to a pollution incident separate into four relatively distinct phases.

- Phase I -- Discovery and Alarm
- Phase II -- Evaluation and Plan Invocation
- Phase III -- Containment and Countermeasures
- Phase IV -- Clean-up and Disposal

Activities under any of these phases may take place concurrently.

400.2 All members of a Response Team may not necessarily be involved in all phases of an incident.

#### 401 PHASE I -- DISCOVERY AND ALARM

401.1 The discovery of a pollution incident may be made through the planned surveillance activities, through the observations of agencies of the various levels of government, by those who caused the spill or by the alertness and concern of the general public. Reports of spills may be made through the contacts listed in Annex I.

401.2 The severity of the spill, which in itself is conditioned by the nature and the quantity of the pollutant and the locality, will determine the level of response required and whether or not there is a need to invoke this Plan.

401.3 The first agency having a responsibility under the Plan which is made aware of a pollution incident shall notify the appropriate designated On-Scene Coordinator immediately (see Annex II). If the pollution incident is of a nature which should be dealt with by another agency or through the invocation of a contingency plan other than this Plan, the appropriate agency is to be notified as soon as possible as illustrated in Annex III.

#### 402 PHASE II -- EVALUATION AND PLAN INVOCATION

402.1 If it is the evaluation of the On-Scene Coordinator that the pollution incident is a major spill and that this Plan is to be invoked, he shall:

- (a) make a recommendation to his Regional Director, his designate or the Chairman of the Response Team to invoke the Plan;
- (b) formulate plans to deal with the situation; and

December 1990

- (c) initiate Phase III and IV actions as appropriate.

The Regional Director of the Operations Division, Ministry of the Environment, his designate or in their absence, the Chairman of the Regional Response Team may invoke this Plan at this time (see Section 203 and Annex II).

#### 403 PHASE III -- CONTAINMENT AND COUNTERMEASURES

403.1 Containment is any measure, whether physical or chemical, which is taken to control or to restrict the spread of a pollutant.

403.2 Countermeasures embrace all activities which are implemented to reduce the impact and the effect of a pollutant on the environment.

#### 404 PHASE IV -- CLEAN-UP AND DISPOSAL

404.1 This phase of the operation is directed towards reducing the residual impact of a spill as much as possible. It will include the removal, where practicable, of a pollutant and contaminated debris from land, water and shoreline, as the case may be, using available resources.

404.2 Pollutants which are recovered as a result of clean-up actions shall be disposed of in accordance with accepted procedures so as to preclude the possibility of further or continuing environmental damage.

404.3 The Ministry of the Environment will determine the suitability of any disposal site which is being considered as receptor for any spilled pollutant, contaminated soil or other debris. No wastes from spills may be disposed of without prior MOE concurrence.

404.4 The On-Scene Coordinator or his designate listed in Annex II is responsible for obtaining MOE clearance for the disposal of wastes associated with spills within the context of this Plan.

## CHAPTER 500

### PUBLIC INFORMATION

#### 501 INTRODUCTION

501.1 When a major spill incident occurs, the public must be provided with timely and accurate information on the nature of the incident and the steps which are being taken to cope with the problem. This policy is followed to obtain understanding from the public, to ensure cooperation from all interested and potentially affected parties and to reduce the possibility of any undue concern or alarm through misinformation.

#### 502 RESPONSE CENTRE NEWS ROOM

502.1 When the Plan is invoked, the Ministry of the Environment will make the appropriate arrangements to assign a professional public information officer who will establish and direct a news office at the Response Centre.

502.2 The participating agencies may be required to provide professional staff to assist the public information officer as designated in 502.1.

502.3 The public information officer shall maintain liaison with participating agencies, including other government press offices, the media and the concerned parties and industries.

502.4 The public information officer shall report to the On-Scene Coordinator or his deputy. He shall be responsible for preparing news releases and for clearing those with the On-Scene Coordinator, his deputy or the Response Team as the case may be.

502.5 The public information officer is responsible to keep the Response Team advised of his activities and is responsible to maintain an account of events in regard to public reaction.

502.6 Pollution incident situation reports and other factual releases of action may be cleared by the On-Scene Coordinator or his deputy, but releases involving major policy considerations must be cleared unanimously by the Response Team.

#### 503 INTERIM PUBLIC INFORMATION ARRANGEMENTS

503.1 In the period following a spill and before this Plan is invoked, the information activities shall be directed by the public information personnel of the Ministry of the Environment or public information personnel of participating agencies in accordance with the information policies of these agencies.

## CHAPTER 600

### SURVEILLANCE

#### 601 OPERATION REQUIREMENTS

601.1 Within the context of this Plan, the operational requirements for surveillance will depend on the circumstances surrounding each pollution incident. Evaluation factors will include the type and quantity of material, location, apparent direction and speed of movement, proximity to critical (water) use areas, and the availability of response resources. The decision to provide surveillance will be qualified by the type, extent and duration of the surveillance coverage needed, which will be re-evaluated as the situation progresses.

601.2 The initial function of surveillance is to identify whether or not a pollution incident exists. In some situations this may be self-evident, and certain situations may be deemed to be a pollution incident before initial surveillance resources are available. The next function of surveillance activity is assessment of the actual threat. These functions provide the On-Scene Coordinator with information about the degree of further response activity which is required, including the need for additional surveillance.

601.3 The degree and type of threat during any particular pollution incident will condition the method and type of surveillance which is required and whether it will be continuous or periodical.

December 1990

CHAPTER 700  
ADMINISTRATION

701 CUSTODIAN

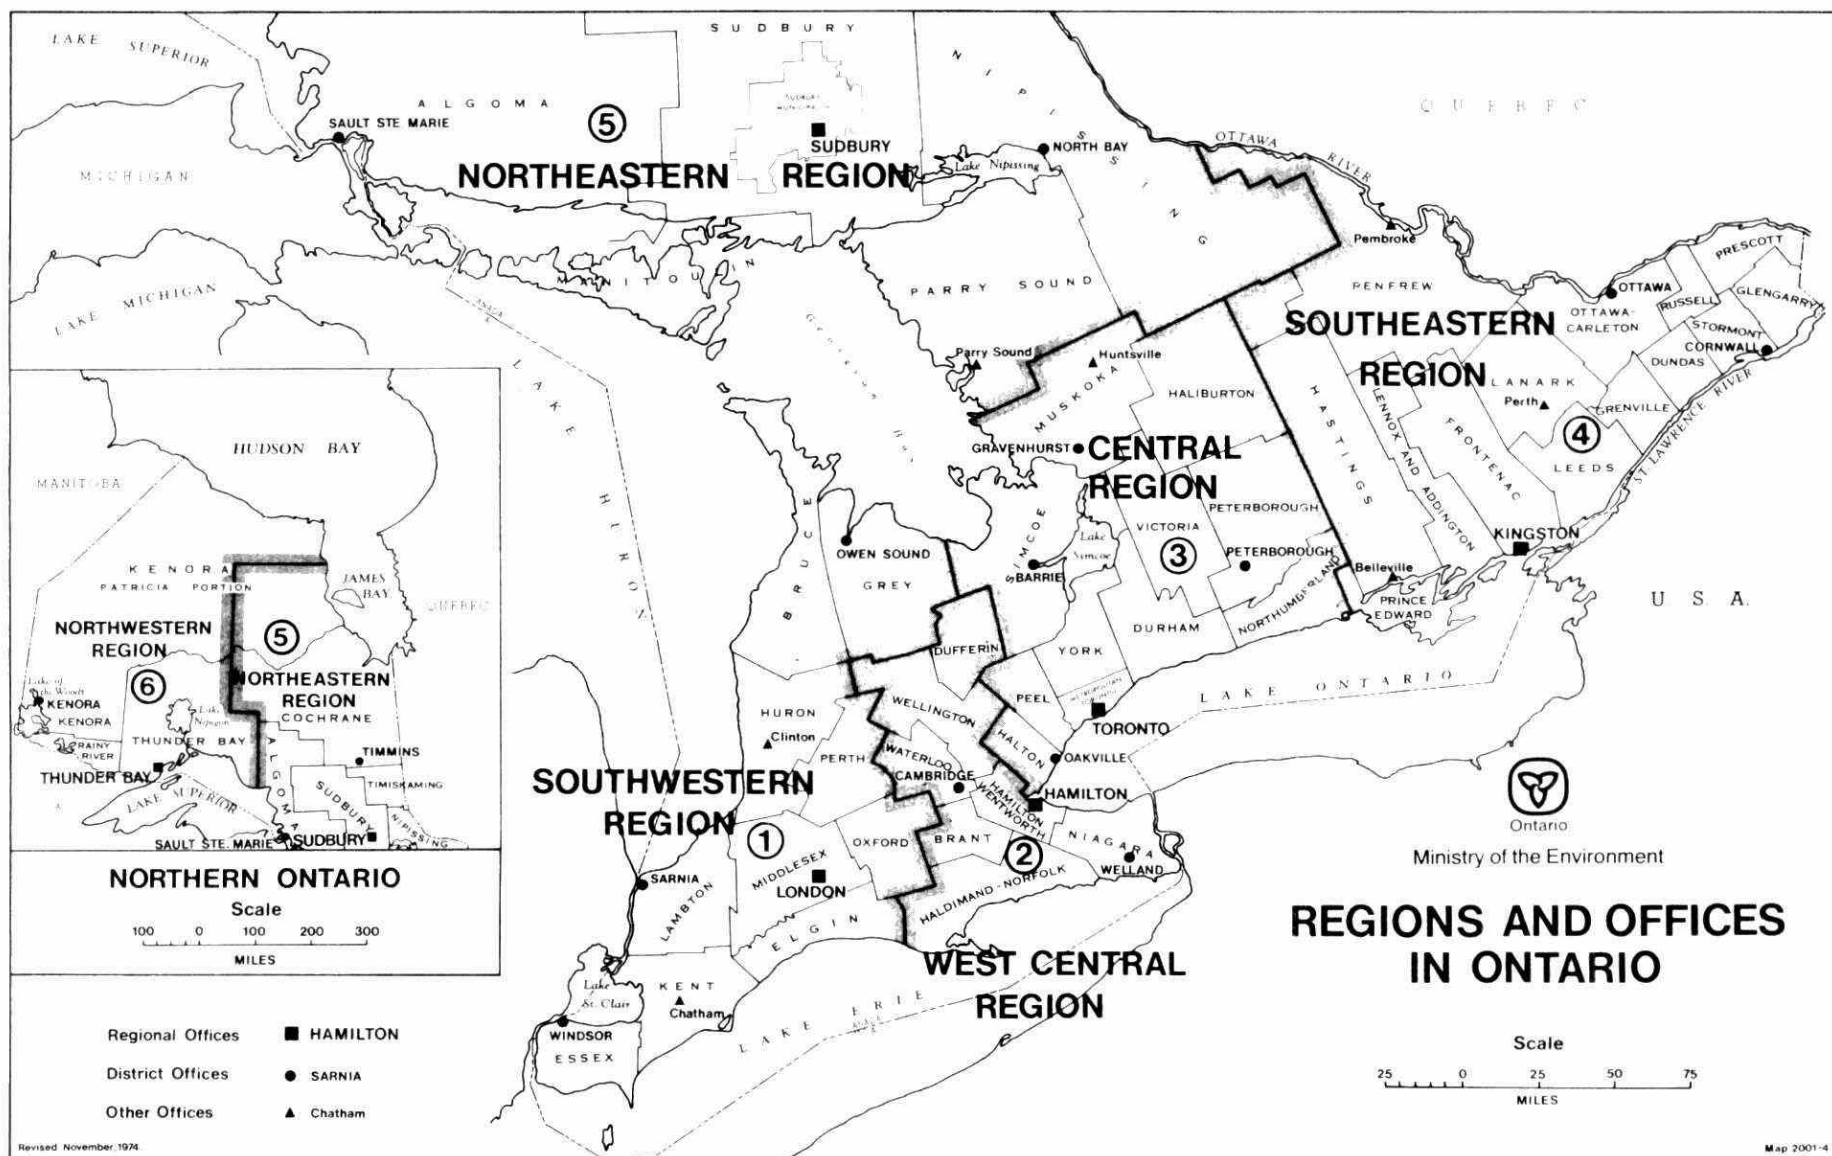

701.1 The Custodian of this Plan and Annexes and any amendments and supplementary publications thereto is the Contingency Planning Coordinator, Spills Action Centre, Ontario Ministry of the Environment, 7 Overlea Boulevard, Toronto, Ontario M4H 1A8 (416) 325-3000. Telecopier (416) 325-3011.

702 AMENDMENTS

702.1 The Plan may be amended by the Custodian at the request of or agreement by the participating agencies listed in paragraph 101.2.

ANNEX I

MINISTRY OF THE ENVIRONMENT CONTACTS

January 1991

ANNEX 1

MINISTRY OF THE ENVIRONMENT CONTACTS

REPORTING SPILLS

Spills must be reported to the Ministry of the Environment IMMEDIATELY.

During normal business hours spills may be reported to the Regional or District Offices listed in this annex.

Spills may be reported 24 hours every day to the:

SPILLS ACTION CENTRE 1-800-268-6060 (Toll free)

or: 416-325-3000

ANNEX II

CONTACT LISTS FOR

RESPONSE TEAMS

January 1991

RESPONSE TEAMS

A Response Team will be established under this Contingency Plan when the Plan is invoked headed by the District Officer of the District Office of the Ministry of the Environment nearest the incident. Other members of the Team will be called in from the participating agencies listed in Section 202 of the Plan from offices nearest to the spill. This Annex (Annex II) lists the various offices of participating agencies from which representatives of co-signing agencies would be drawn.

The Response Teams can be activated for major spills by a call to the appropriate District or Regional Office of the Ministry of the Environment, listed in Annex I, or by contacting the appropriate on-scene coordinator or deputy on-scene coordinator in this Annex.

During off-hours the Response Teams can be activated by a call to:

THE SPILLS ACTION CENTRE

CONTACT LIST III-4

MUNICIPAL EMERGENCY PLANNING OFFICERS

The contacts provided in this list identify those individuals in Ontario at the municipal level who, among other things, are responsible for the development of peacetime emergency plans which include provisions for the evacuation of people potentially affected by natural or man-made disasters. The Province of Ontario Contingency Plan for Spills of Oil and Other Hazardous Materials depends on local emergency plans in spill incidents which necessitate evacuation of people.

In all cases, evacuation is effected through local or Provincial police forces. The telephone numbers for these could be obtained with the aid of local telephone directories. OPP contacts are listed in Contact List III-8.

IN CASES OF EMERGENCY, OBTAIN POLICE ASSISTANCE  
FROM THE TELEPHONE OPERATOR

CONTACT LIST III-14

CANUTEC (Ottawa) 613-996-6666

CANUTEC, the Canadian Transport Emergency Centre (Centre Canadien d'urgence transport) established in Ottawa by Transport Canada, is designed to provide information and communications assistance in case of transport emergencies involving dangerous goods such as spill, leak, fire or exposure. CANUTEC, staffed by professional chemists operates 24 hours a day, year round and can be contacted at (613) 996-6666, collect (Ottawa).

CANUTEC can link emergency response personnel at the scene directly with individuals or organizations who can offer technical advice, such as shippers or manufacturers of the product or others who handle the same product. CANUTEC may be able to arrange on-scene assistance from organizations offering emergency response programs.

CANUTEC's product information bank has been prepared primarily for transport emergencies but the centre also can provide response information for non-transport emergencies involving dangerous goods.

When an emergency call is received by CANUTEC, the Officer on duty attempts to obtain the following essential information:

Caller's name/organization	Help on site/requested
Call-back number/location	Shipper/origin
Product identification	Manufacturer
Problem details	Carrier
Types of vehicle/packaging	Consignee/destination
Number of injuries/deaths	Call sign/car/tractor/ trailer/flight number
Time/emergency location	
Environment/local conditions	Bill of lading/waybill number

The CANUTEC officer provides the following information about the product:

- |                              |                                 |
|------------------------------|---------------------------------|
| - physical properties        | - action which can be taken for |
| - chemical properties        | the protection of life,         |
| - health hazards             | property and the environment    |
| - fire and explosion hazards | - other available information   |

CANUTEC has information on approximately 125,000 products.

CANUTEC personnel do not go to the scene of an emergency, but, if necessary, can activate emergency response plans for on-scene assistance.

For general information call (613) 992-4624.

CONTACT LIST III-15

(technical data on hazardous materials)

TRANSPORTATION EMERGENCY ASSISTANCE PLAN  
(T E A P)

The Transportation Emergency Assistance Plan is operated by the:

Canadian Chemical Producers' Association  
Suite 805, 350 Sparks Street  
Ottawa, Ontario  
K1R 7S8

TEAP is a mutual assistance chemical transportation emergency response plan operating under a contractual agreement established between members of the Canadian Chemical Producers' Association (CCPA). It is also available to non-members of CCPA under certain conditions.

TEAP maintains a twenty-four (24) hour per day, seven (7) day per week emergency response capability at ten (10) Regional Response Centres (RRCs) located across Canada.

A TEAP response is activated by a call from an owner/shipper who is a member of the Plan and whose chemicals are involved in a chemical transportation emergency.

Those requiring assistance in the event of a chemical transportation emergency are urged to:

1. identify the chemical(s) involved from the carrier's shipping documents,
2. obtain the shipper's emergency telephone number from shipping papers, manifests, or the shipping container(s), and
3. contact the shipper for assistance; or
4. call, collect, for assistance to Transport Canada's CANUTEC service at: (613) 996-6666.

A TEAP response can only be activated by a participant in the Plan. This first response capability is expected to have trained and equipped personnel at an accident scene within hours of having received a call for assistance. Owner/shippers calling out TEAP teams are expected to provide the TEAP team with a knowledgeable Technical Advisor and to replace these teams with their own backup teams within twenty-four (24) hours.

ANNEX IV

CHEMICAL OIL TREATING AGENTS

ANNEX IV

CHEMICAL OIL SPILL TREATING AGENTS

<u>TYPE OF PRODUCT</u>	<u>PAGE</u>
SINKING AGENTS	IV-1
SURFACE TENSION MODIFIERS	IV-1
OTHER CHEMICAL OIL SPILL TREATING AGENTS	IV-1
DISPERSANTS	IV-2

### SINKING AGENTS

Materials or products which are designed to remove oil slicks from the surface of watercourses, by a means or method frequently referred to as sinking, are not approved for use in the natural waters in Ontario.

### SURFACE TENSION MODIFIERS

Certain chemical compounds have been developed which may be classified as collecting agents or surface tension modifiers. Such components can be used under conditions of absolute calm wind as an effective tool during the process of cleaning up some oil spills to small and still water bodies. It is necessary that staff of the Ministry of the Environment (see Annex 1) be consulted before such products are used.

### OTHER CHEMICAL OIL SPILL TREATING AGENTS

Various chemicals have been developed for aiding combustion of oil, gelling oil, enhancing the biodegradability of oil, etc. The Ministry of the Environment requests to be consulted prior to the use of any such materials (per the offices listed in Annex 1).

Industrial cleansers, emulsifiers or similar materials may not be used in such a manner which will result in oil being dispersed into the water column of the natural environment. For example, the use of cleansers emulsifiers, etc., as additives to steam jennies or other high pressure water systems used to clean spilled oil off rocky shorelines, wharfs, docks, etc., may fall under this category and is discouraged. However, the Ministry of the Environment may give prior permission for such use under extraordinary circumstances (use contact offices listed in Annex 1) and such use will be considered to constitute dispersing oil into water, in which case the rules under the subject of "Dispersants" as outlined in this Plan will prevail (see paragraph 105.8 and 201.7 and the section on dispersants in this Annex).

## DISPERSANTS

### GUIDELINES FOR THE USE OF DISPERSANTS

#### 1. General Requirements

- (a) Except in the cases of extreme emergency as noted in 3(a), chemical dispersants shall be used only with the express permission of the Regional Director of the Ontario Ministry of the Environment (Annex 1, also page II-ii of Annex II). Chemical dispersants can then be used under competent direction and in accordance with recommended techniques.
- (b) The Ontario Ministry of the Environment, in consultation with other regulatory bodies as required, will determine the priorities of protection in each spill incident and the use of dispersants is subject to these priorities.
- (c) Ordinarily, only the dispersants published in this Annex may be used. Industrial cleansers, emulsifiers, etc. may be permitted under extraordinary circumstances referred to under 3(a).
- (d) All uses of chemical dispersants must be formally documented, as outlined in these guidelines and all such documentation must be made available to the Regional Director mentioned in 1(a) above. A carbon copy of any such report(s) must also be sent to Environmental Emergencies of Environment Canada (for address see section 6, page IV-6 of this Annex).

#### 2. Restrictions on the Use of Dispersants

The use of dispersants will usually be avoided:

- (a) in any waters containing major fish populations or large breeding or migration areas for species of fish or other aquatic life which may be damaged or reduced in market value by exposure to dispersants and/or dispersed oil;
- (b) in any waters where such use may affect surface water supplies (tests have not been undertaken to determine the safety of consuming dispersants, dispersants and oil mixtures or their by-products);

- (c) where eventual dilution of the dispersed oil is limited either because the water is quiescent or because the water volume is small relative to the spill size;
- (d) on oils that have been deposited on sandy beaches or on shorelines with important flora and fauna;
- (e) under conditions where the dispersant is probably ineffective. (Dispersants have been formulated to date for use in salt water environments. Tests have shown these dispersants to be generally ineffective when used on oil spills to fresh waters. The effectiveness of dispersants also decreases significantly in cold water situations.)

### 3. Possible Conditions for the Use of Dispersants

Dispersants that satisfy the acceptability criteria may be considered for use:

- (a) when their use will prevent or reduce hazard to human life or limb, or substantial hazard of fire to property. These priorities are established by local fire and police forces and supersede this Plan. Caution is advised in the case of spills of volatile oils where both the application of the dispersant and the subsequent agitation may increase fire hazards. Furthermore, it should be realized that in spills of volatile oils -- e.g., No.1 to No.4 fuel oils -- natural agitation by winds, waves and current may be adequate to disperse the oil;
- (b) when their use will prevent or substantially reduce hazard to a significant population of waterfowl or marine mammals;
- (c) when their use will prevent or substantially reduce significant damage to valuable property except in conditions;
  - (i) where such use is restricted as noted in 2 above; and
  - (ii) where other methods for controlling and removing the oil are reasonably effective.

4. Recommended Application Procedures

It should be emphasized that dispersants may be used only when other methods are not reasonably effective, as outlined in 3 above. Furthermore, if approval for use has been granted, the following procedures must be followed:

- (a) the Effectiveness Table for the dispersant shall be used as a guideline to determine its applicability under the given field conditions;
- (b) if the dispersant is considered to be effective, it shall be applied only if the proper equipment for application and mixing is available. Such equipment may include portable pump-eductor systems, portable pressure tank applicators, spray boats with spray booms, boats with propellers, other mixing devices, etc;
- (c) after using a minimum quantity of dispersant, the effectiveness shall be evaluated. If the dispersant is found to be ineffective, dispersing will be discontinued.
- (d) when using dispersant, only the strict minimum must be used to correct the condition for which approval was given.

5. Required Information on Uses of Dispersants

(a) Details of the Spill:

- Location
- Date and time of spill
- Source and type of oil
- Estimated amount, slick area and thickness
- Appearance of the oil
- "Age" of the oil

(b) Environmental Conditions

- Air and water temperature
- Wind, waves and currents
- Water depth
- Ecological use

(c) Dispersant Application

- Reason for dispersant use
- Type of dispersant
- Amount used
- Application and mixing methods (equipment, manpower, time)
- Approval for use obtained from (name, agency, date, etc.)
- Application rate
- Amount of oil treated

(d) Observations

- Estimated amount of oil left on water surface
- Observations on the dispersed oil (spreading, disappearance, resurfacing, etc.)
- Any observations on possible effects of oil (waterfowl, fish, shorelines, vegetation)
- Any observation after the application

6. List of Acceptable Oil Spill Dispersants

The following pages list products which have been thoroughly tested by Environment Canada and are acceptable for use in treating oil spills within the limitations outlined in this Plan and in accordance with the "Guidelines on the Use and Acceptability of Oil Spill Dispersants" publication EPS 1-EP-84-1 (2nd edition) available from:
